PROFESSIONAL SUMMARY

Fourth-year BSIT student at the Technological Institute of the Philippines with project experience building web applications, database-backed features, and AI-enabled applications. Contributed to a Django learning platform, a Laravel job platform, and an Android PPE detection app using on-device computer vision.

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, SQL

Frameworks & build tools: Django, Laravel, React, FastAPI, Vite

AI/ML: Computer vision; YOLOv8 and TensorFlow Lite PPE detection; SSD MobileNet person detection

Databases: PostgreSQL, MySQL, Firebase / Firestore

Developer tools: Git, GitHub, Visual Studio Code, Amazon Q, Kiro, Microsoft Agent, Codex

SELECTED SOFTWARE DEVELOPMENT PROJECTS

BrightTrack LMS | Python, Django, PostgreSQL, AI/ML

Contributed to web development and database integration for a learning platform with learning analytics, academic performance tracking, and wellness monitoring.

Demo: https://brighttrack.onrender.com/ (static preview)

JobAI | PHP, Laravel, JavaScript, MySQL, AI assistant

Developed application features for a full-stack platform connecting employers and job seekers through separate portals, with an AI-powered administrative assistant, using Laravel, MySQL, and JavaScript.

Demo: https://jobai-1-7c66.onrender.com/ (static preview)

HAZORA | Web dashboard: React, Vite, Firebase, Python, FastAPI, Computer Vision

Construction-safety dashboard for authorized teams to monitor ESP32-CAM feeds, review AI-flagged PPE incidents, view safety analytics, and export reports. Role-based access supports site and head-office staff.

HAZORA Mobile | Java, Android, CameraX, TensorFlow Lite, YOLOv8, SSD MobileNet

Implemented a multi-frame scan flow that analyzes up to three camera frames and combines results. Runs on-device TensorFlow Lite inference with YOLOv8 PPE detection for helmets, vests, and shoes, alongside SSD MobileNet person detection.
